EXPLANATIONS OF RELEVANCY OF REFERENCES

Sato et al. describes that a nucleotide sequence of Chromosome 5.1 of Arabidopsis thaliana was analyzed and, as a result, GenBank Accession No. AB005238 (MKP11) was cloned. Sato et al. also describes that MKP11 includes a DNA region encoding glutathione Stransferase of Arabidopsis thaliana, which is disclosed in AB005238 as gene_id: MKP11.7 (protein_id=BAB10509.1). However, Sato et al. does not contain any description or suggestion regarding the specific function of this protein (BAB10509.1).

The Gen Bank Acc. No. Q96324 discloses an amino acid sequence encoding glutathione S-transferase of *Arabidopsis thaliana*, which has 100% of identity with that of AtGSTF11 described in Wagner U et al., "Plant Molecular Biology", already of record. However, the amino acid sequence of AtGSTF11 demonstrates only 69% of an amino acid sequence identity with the sequence shown in "SEQ ID NO: 2" of the present application (TT19 protein). AtGSTF11, which is derived from *Arabidopsis thaliana* and is used in Alfenito M. et al., "The Plant Cell", also already of record, as H36860, encodes a protein homologous with Petunia An9 protein. However, Gen Bank Acc. No. Q96324 does not contain any description or suggestion regarding the specific function of the TT19 protein of SEQ ID NO: 2; and

PCT Publication No. WO 02/10210 discloses an amino acid sequence encoding glutathione S-transferase-like protein as SEQ ID NO: 2730 on page 207 of WO02/010210 cited herein, which has 100% of identity with that of SEQ ID NO: 2 of the present application. However, Gen Bank Acc. No. Q96324 does not contain any description or suggestion regarding the specific function of this protein (SEQ ID NO: 2730).
